Part 2: World watches Britain's 'living wage' experiment

- a. governments try to deal with inequality
 - b. governments try to deal with anaemic wage growth
- a. try to redistribute growth more fairly
 - b. to encourage employers to move up the value chain
- because it would destroy jobs
- increase in the minimum wage does not do any damage to employment
- a. "Big Mac" minimum wage index
 - b. where it stands relative to average pay
- the UK could get to the upper end of the OECD countries
- it recommends minimum wage rates to the government
- the lowest-skilled workers (who will be more expensive to employ)
- the minimum wage is too high to enable refugees to find jobs
- low-paid workers will spend more money in the local economy
